EOC- ENE	K										
	Pre-K										

COMMENTS: *Estuarine arenaceous foraminiferal assemblages in SWCs at
 1285, 1286.5, 1288 and 1291.
 Early Oligocene planktonics found at 1285 and 1288 but
 not diagnostic for precise zonation. However suspect interval
 1285 to 1291 was early Oligocene.

CONFIDENCE RATING: 0: SWC or Core - Complete assemblage (very high confidence).
 1: SWC or Core - Almost complete assemblage (high confidence).
 2: SWC or Core - Close to zonule change but able to interpret (low confidence).
 3: Cuttings - Complete assemblage (low confidence).
 4: Cuttings - Incomplete assemblage, next to uninterpretable or SWC with depth suspicion (very low confidence).

NOTE: If an entry is given a 3 or 4 confidence rating, an alternative depth with a better confidence rating should be entered, if possible. If a sample cannot be assigned to one particular zone, then no entry should be made, unless a range of zones is given where the highest possible limit will appear in one zone and the lowest possible limit in another.
