**Figure 1: SWC 3, 3471m, 2mm, PPL**

A brown tabular feldspar grain shows dissolution; some secondary porosity therefore occurs within this grain. Elsewhere large blue areas, partly rimmed with clay, are also secondary pores (S). Smaller pores are primary (A). Overgrowths (O) occur on many grains.

**Figure 2: SWC 3, 3471m, 2mm, PPL**

Typical field which shows some excellent overgrowths and numerous curved contacts between grains (C).
