* Zone E can be subdivided into:

E1 Highest 3370 (0) to Lowest 3670 (0)

E2 Highest 3700 (3), alternative 3870 (0) to Lowest 3970 (0)

Zone J is present in cuttings from 5420 feet.

COMMENTS: The SWC's below 5360 feet are contaminated by drilling mud. The foraminifera found in these SWC's are all contamination derived from higher in the well.

Note: If highest or lowest data is a 3 or 4, then an alternate 0, 1, 2 highest or lowest data will be filled in if control is available.

If a sample cannot be interpreted to be one zonule, as apart from the other, no entry should be made.

- 0 SWC or Core - Complete assemblage (very high confidence).
- 1 SWC or Core - Almost complete assemblage (high confidence).
- 2 SWC or Core - Close to zonule change but able to interpret (low confidence).
- 3 Cuttings - Complete assemblage (low confidence).
- 4 Cuttings - Incomplete assemblage, next to uninterpretable or SWC with depth suspicion (very low confidence).
