TUNA A-1 (LOWER) SUBSURFACE OIL SAMPLES

Source: Esso Standard Oil (Australia) Ltd., Tuna A-1 (Lower) Well

Date Taken: June 26, 1968

Sampling Data

Sampled in the one-half gallon isolation chamber of an FIT subsurface tool, and transferred into shipping containers on shore. Free gas was observed when excess water was drained from container number 32.

Sample Evaluation

The sample in container number 629 was used for the analyses reported.

<u>Container No.</u>	<u>Saturation Pressure</u>	
	<u>psig at 75° F</u>	<u>psig at 201° F</u>
32	3100	3670*
629	2320	2890
843	1655	2225*

Reservoir Data

Elevation RDB	31 ft
Depth, bdf	6608 ft
Original reservoir pressure	2890 psig
Reservoir temperature	201° F 93.9° C

Properties of Samples

Pressure-Volume Relations	Table I
Flash Liberation and Differential Liberation Results	Table II
Comparison of Experimental and Computed Flash Liberation Results	Table II-A
Hydrocarbon Analysis of Subsurface Oil Sample - Pour Point, Wax and Sulfur Content in Residual Crude Oil	Table III
Viscosity of Reservoir Oil at 201° F	Table IV

*Saturation pressure of sample in container number 32 was in excess of the reservoir pressure at reservoir temperature. Separator gas/stock-tank oil ratio of sample in container number 843 was less than the 600 cu ft/bbl ratio measured in the field.

Specific Volume at Saturation Pressure = 0.02301 cu ft/lb

*Calculated data for use in correcting subsurface oil sample

P_s = Saturation pressure of sample at 201° F, psia

P = Pressure below saturation pressure, psia

V_t = Two-phase relative volume factor at 201° F and P

V_{bp} = Saturated oil relative volume at 201° F and 2905 psia (2890 psig)
