

Figure 4a
General view showing an open framework of well sorted sand grains. Tangential and point contacts are common. Green chlorite lines all pores. Swc 9, depth 1426m. Plane light. Field of view 2.5mm.

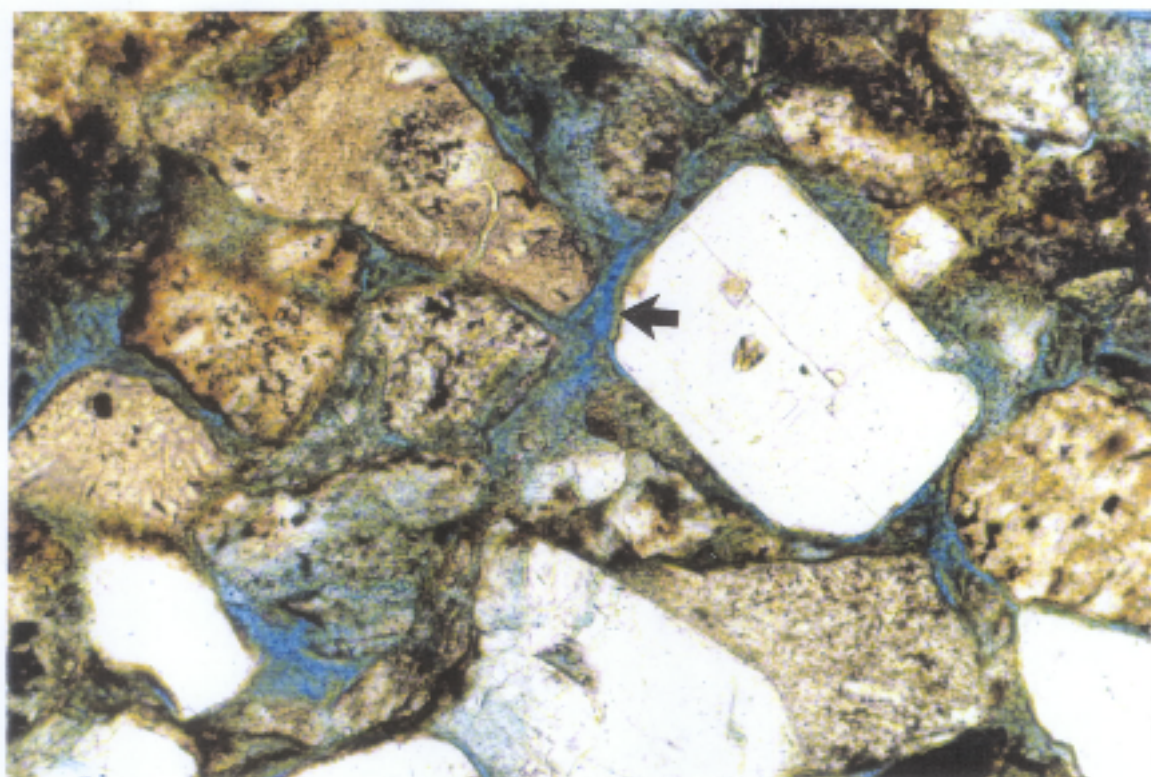

Figure 4b
Lithic grains are generally smaller than the feldspar. The lithic grains are generally undeformed and are cemented with rims of green chlorite (arrow). Swc 9, depth 1426m. Plane light. Field of view 1mm.
