

# ZANE GREY (UPDATE)

## Conclusions

- Top Latrobe updip depth leads to Gurnard-1 and Nannygai-1 - medium risk/low reward
- North and south fault blocks with large, deeper Latrobe Group targets
- Northern block updip to Nannygai Pay Zone and Roundhead Member in faulted anticline - low depth conversion risk?
- Southern block untested Volador Formation and Golden Beach in fault trap - large vertical closure=low depth conversion risk  
\* Close to Bream/Kingfish Pipeline
